Art Unit: 1761

It is noted that Applicant refers to an Information Disclosure Statement (IDS) filed March 21, 2002. The instant application does not have an IDS filed on March 21, 2002.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kunz et al (US Patent No. 5578339) and Willibald-Ettle et al (US Patent No. 6248386) for the reasons set forth in rejecting claims 1-8 in the last office action.

Kunz et al disclose the use of 1,1-GPM and sorbitol in candy (see entire patent, especially claims 5, 8, 21, and 22).

Willibald-Ettle et al disclose hard caramels comprising 1,1-GPM and sorbitol (see entire patent, especially claims 9 and 12).

The claims differ as to the specific amounts employed.

In the absence of a showing to the contrary, the amounts employed are no matter than a matter of choice and well-within the skill of the art and at most are deemed optimization, In re Boesch 205 USPQ 215. Applicant is using known components for their art-recognized function to obtain expected results.

It would have been obvious to a person of ordinary skill in the art, at the time the invention was made to use the claimed percentages in either Kunz et al

Art Unit: 1761

or Willibald-Ettle et al because the use and manipulation of both 1,1-GPM and sorbitol are conventional in the production of hard candies such as caramels.

Applicant's arguments filed November 3, 2004 have been fully considered but they are not persuasive.

Applicant argues that the prior art teaches away from the claimed invention and that there is no motivation to combine the teachings of the prior art.

Both Kunz et al or Willibald-Ettle et al teach the conventional use of 1,1-GPM and sorbitol in the production of candy/caramel.

In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, the prior art is directed to the conventional use of 1,1-GPM and sorbitol in the production of candy/caramel.

In the absence of a showing to the contrary, Applicant is using known components to obtain no more than expected results.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 1761

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
